

Product Spotlight

PAC Strapping Products SM-65

Delaware Valley
Packaging Group

Overview

The PAC Strapping Products SM65 is a high-speed automatic strapping machine built for demanding packaging environments, delivering up to 65 straps per minute for efficient, high-volume operations. With support for strap widths from 1/4" to 5/8", a user-friendly touch-panel interface, and easy maintenance, it provides flexible, reliable, and cost-effective performance in its class.

Key Benefits

- **High-Speed Performance** – Delivers strapping speeds of up to 65 straps per minute for high-volume packaging operations.
- **Flexible Strap Compatibility** – Handles polypropylene strapping from 1/4" to 5/8", allowing versatility across multiple carton sizes and applications.
- **User-Friendly Touch Panel Controls** – Intuitive interface simplifies machine setup, adjustments, and operation for packaging line operators.
- **Reliable Automatic Operation** – Automatic strap feeding, tensioning, and sealing ensure consistent and secure carton strapping.
- **Low Maintenance Design** – Engineered for durability with easy access components that simplify service and reduce downtime.

Ideal Applications

- **Logistics and Warehousing** - Ideal for securing boxes, cartons, and pallets for efficient storage and safe shipping in distribution centers.
- **Food and Beverage Industry** - Helps strap cases of food products, beverages, and other consumables for transit and storage.
- **Pharmaceutical and Cosmetics** - Used to strap boxes containing medical supplies, pharmaceuticals, and cosmetic products to maintain security and prevent damage during transport.
- **Manufacturing** - Utilized for strapping product components, machinery, and finished goods in manufacturing plants for secure handling.
- **Automotive Industry** - Used to secure automotive parts, tires, and assemblies during production, storage, and shipment to ensure safety and stability.

Key Features

- **Increase Packaging Throughput** – High-speed operation keeps up with demanding production lines and helps maximize packaging efficiency.
- **Improve Package Security** – Consistent strap tension ensures cartons remain stable and protected during handling and distribution.
- **Reduce Manual Labor** – Automated strapping minimizes operator involvement and frees staff to focus on other production tasks.
- **Adapt to Multiple Packaging Needs** – Flexible strap width capability allows the system to handle a wide range of carton sizes and applications.
- **Lower Operating Costs** – Reliable performance and easy maintenance help reduce downtime and improve overall packaging line productivity.

Proven Results

- **Up to 65 straps per minute** for maximum packaging throughput
- **Consistent, secure strapping** that protects cartons during handling and shipping
- **Reduces manual labor**, allowing operators to focus on other tasks
- **Versatile strap widths and carton sizes** for flexible operations
- **Reliable performance with minimal downtime** to keep your line running efficiently
